# Identify configuration deviations

## Understand configuration deviation

The Config Drift feature identifies configuration deviations by comparing a system template to a “golden” or base system template. You can schedule weekly or monthly drift reports or generate them on-demand. You can mitigate some deviations by using the Ansible Playbooks, which are provided in the config drift report.

This feature is available to systems with Advisor and Expert Support contracts only.

You can look at the following diagram to understand the workflow to identify configuration deviations and generate the report.

You can view the following video to generate and run an Ansible Playbook to fix the configuration deviations:

## Add a config drift template

You should add a template to compare the system and cluster configurations and detect the configuration deviations in near real time. The config drift templates are added using systems running AutoSupport data.

### Steps

1. From the left pane, click **Config Drift**.
2. Click **Add Template**.
3. Provide the requested values.
4. Optional: Click **Edit** to edit the template.
5. Click **Add Template**.

## Compare a config drift template

You can compare the system and cluster configurations and detect the configuration deviations in near real time.

### Steps

1. From the left pane, click **Config Drift**.
2. Select one of the existing templates or click **Add Template** to add a new template.
3. Generate a config drift report

You can generate a report immediately or you can schedule the report to be generated on a weekly or monthly basis.

To generate a report immediately	To schedule the report to be generated on a weekly or monthly basis
<ol style="list-style-type: none"> <li>1. Select a category and provide the requested values for the report.</li> <li>2. Select <b>Include only drifts</b> option to download only the configuration deviation changes.</li> <li>3. Click <b>Submit</b>.</li> <li>4. <a href="#">Download and view the config drift report</a>.</li> <li>5. Run Ansible Playbook (included as part of the config drift report) to mitigate the drifts.</li> </ol>	<ol style="list-style-type: none"> <li>1. Click the <b>Schedule Report</b> tab.</li> <li>2. Select a category and provide the requested values for the report.</li> <li>3. Select <b>Include only drifts</b> option to download only the configuration deviation changes.</li> <li>4. Select the frequency of the report.</li> <li>5. Select the start date and end date for the report.</li> <li>6. Click <b>Submit</b>.</li> <li>7. <a href="#">Download and view the config drift report</a>.</li> <li>8. Run Ansible Playbook (included as part of the config drift report) to mitigate the drifts.</li> </ol>

An email is sent with the details of the configuration deviation between the selected systems.

## Generate a drift timeline report

You can compare the AutoSupport data of the last 90 days and generate a report that provides information about the events and the configuration deviations that have occurred.

### Steps

1. From the left pane, click **Config Drift**.

2. Select the **Drift Timeline** report type.
3. Generate a drift timeline report

You can generate a report immediately or you can schedule the report to be generated on a weekly or monthly basis.

To generate a report immediately	To schedule the report to be generated on a weekly or monthly basis
<ol style="list-style-type: none"> <li>1. Select a category and provide the requested values for the report.</li> <li>2. Select <b>Include only drifts</b> option to download only the configuration deviation changes.</li> <li>3. Click <b>Submit</b>.</li> <li>4. <a href="#">Download and view the drift timeline report.</a></li> </ol>	<ol style="list-style-type: none"> <li>1. Click the <b>Schedule Report</b> tab.</li> <li>2. Select a category and provide the requested values for the report.</li> <li>3. Select <b>Include only drifts</b> option to download only the configuration deviation changes.</li> <li>4. Select the frequency of the report.</li> <li>5. Select the start date and end date for the report.</li> <li>6. Click <b>Submit</b>.</li> <li>7. <a href="#">Download and view the drift timeline report.</a></li> </ol>

## Manage a template

You can clone a template, share a template, edit the details of an existing template, and delete a template.

Sharing a template saves the time and effort required to create and customize a template that has already been created by a user. Shared templates can be mutually changed by shared users, allowing several users to make modifications to a single golden template.

### About this task

- Access to shared templates can be revoked at any time.
- Shared users can delete this template from their account at any time.

### Steps

1. From the left pane, click **Config Drift**.
2. Click  to make a copy of the template.
3. Click  and enter the usernames with whom you want to share the template.

If you enter the email address of the user instead of the username, the template will not be shared.

4. Click  to update the details of the template.
5. Click  to delete the template.
